<p>With warm weather finally taking a firm grip on the area, you probably wouldn't remember that we had more snow this month than we did in March! Remember the 1.3" we received between 0700 on the 7th and 0700 on the 8th? Well good-bye, ol' man winter. April wound up 1.4 degrees F cooler than average. Precipitation ended up <i>exactly</i> average at 3.46" (thanks in large part to the big rains late in the month). As for myself...this is the end of the line for me, as well as all of the senior Meteorology students. It definately has been a pleasure being your Senior Weather Director, and all the fun times that we have shared together as a class will never be forgotten. Good luck to all of you, whatever path you choose to take. We'll see you down the road...oh yeah, don't forget the "Chicken Dance". Jimbob.</p>											
Jim R. Krzak, Senior Weather Director NIU
