## Discussion

The August 2007 average high temperature of $82.4^{\circ}$ was close to the normal for the month as it was only $0.4^{\circ} \mathrm{F}$ above the 1971-2000 average high. The ninety degree mark was only breached twice, on the $8^{\text {th }}$ and again on the $29^{\text {th }}$. The August 2007 average low was exactly $4^{\circ} \mathrm{F}$ warmer than the $1971-2000$ average, tying for the $3^{\text {rd }}$ warmest average low temperature on record. The August 2007 average temperature was $2.2^{\circ} \mathrm{F}$ warmer that the 1971-2000 average, placing $6^{\text {th }}$ for the warmest average temperature on record.

With $12.02^{\prime \prime}$ of rainfall, August 2007 was the $2^{\text {nd }}$ wettest August behind only the $14.23^{\prime \prime}$ that fell in August 1987. An extraordinary 4.85 " of rain fell on August $24^{\text {th }}-$ the $4^{\text {th }}$ most rainfall for any single day of the year on record and the $2^{\text {nd }}$ most for a day in August. The rainfall on the $25^{\text {th }}$ occurred after almost three weeks of continuous daily rain, causing extreme flooding throughout the area which forced many residents to be evacuated. The Kishwaukee River rose to 15.24 feet, the second highest level the river has ever been recorded at. Most of the bridges in DeKalb were covered in flood waters, blocking most paths in and out of town DeKalb during NIU’s move-in weekend. NIU was closed on the $24^{\text {th }}$ due to flooding in many areas of the campus.
