## Discussion

April 2008 was a rather average month in terms of temperature. The average temperature from 1971-2000 was only $0.1^{\circ} \mathrm{F}$ warmer than the April 2008 average temperature. The year to date January-April 2008 average high was the $3^{\text {rd }}$ coolest on record. The highest temperature for April was $76^{\circ} \mathrm{F}$, which occurred on the $22^{\text {nd }}$. The lowest temperature for April was $29^{\circ} \mathrm{F}$, which occurred on the $14^{\text {th }}$ and $15^{\text {th }}$.

We had a little more than average precipitation for April. The total for the month was 4.37 inches, 0.85 inches more than the average. We've had the $6^{\text {th }}$ highest liquid equivalent year to date. The 2007-2008 seasonal snow to date ranks as the $2^{\text {nd }}$ most snowfall on record, though we have only had a trace of snowfall for April.
