## Discussion

Temperatures in January 2008 ranged from record breaking highs to sub-zero lows. On January $30^{\text {th }}$, a $52^{\circ} \mathrm{F}$ diurnal temperature range occurred - the $2^{\text {nd }}$ largest diurnal range on record in DeKalb. Three days, January $7^{\text {th }}-9^{\text {th }}$, tied or broke the record high temperature for that day. Despite the record breaking highs, the average high for January was only $1.7^{\circ} \mathrm{F}$ warmer than the $1971-2000$ climate average. The low temperature reached $-15^{\circ} \mathrm{F}$ on two days, the $24^{\text {th }}$ and $25^{\text {th }}$, with nine other days also having lows below zero. The average low for January, however, was only $0.7^{\circ} \mathrm{F}$ below the 1971-2000 average. Even with the large range of temperatures that occurred in January, the average temperature was only $0.3^{\circ} \mathrm{F}$ warmer than the 1971-2000 normal temperature.

Only 0.2 inches more liquid equivalent fell than average for January. A total of 0.61 inches of the liquid equivalent occurred as rain. All but eight days in January showed at least a trace of snow on the ground. January 2008 witnessed four more inches of snow than average for the month. For the seasonal year, DeKalb now has had 12.7 inches more snow, with 34.4 inches, than the average (to $1 / 31$ ) snowfall of 21.7 inches. The 2007-08 seasonal snow to date currently ranks the third highest on record in DeKalb.
