## Discussion

Temperatures were substantially above historical averages in July 2010. The average (mean) temperature was 75.4 degrees, 1.9 degrees above the 1971-2000 historical average of 73.5 degrees; although the mean temperature was tied with 1995 as only 21 st warmest on record since 1896, it was the warmest July since 2002, when the mean temperature was 77.3 degrees. Warm nights (as shown from the monthly average low temperature) were the main contributor to the above-average mean temperature: while the average high temperature of 85.3 degrees was only 1.1 degrees above the historical average, the average low temperature of 65.5 degrees was 2.6 degrees above the historical average and ties with 2006 as the sixth warmest on record since 1896. It is clear that elevated humidity from above-average rainfall and soil moisture and a maturing corn and soybean crop in excellent condition (at least locally) contributed to the warmer-than-average nights.

Precipitation was well above the historical average in July. The monthly total rainfall of 6.92 in . was 162 percent of the historical average total of 4.26 in ., ranked 13 th greatest since 1896 , and was the greatest since 2007, when the fifth greatest total (since 1896) of 8.20 in . was recorded. Rainfall events lacked even distribution, for they were concentrated around the end of the first and the second weeks as well as the fourth week of the month. Seventy percent of the monthly rain fell during a series of nocturnal thunderstorms on the night of the 23 rd and early morning of the 24th such that 4.67 in. was recorded on the 24th (a record amount for that date, ninth greatest daily rainfall on record since 1896, and greatest daily amount since 24 August 2007) and 0.14 in. on the 25 th (as well as 0.23 in . on the morning of the 23rd, where amounts of up to 1.63 in . (at the Genoa Co-op Station) were recorded in northern DeKalb County, in association with rainfall from the same synoptic feature for a 23rd-to-25th storm rainfall total of 5.04 in . at DeKalb). Storm rainfall totals for the 23 rd to 25 th ranged widely across DeKalb County from less than three inches in the far south to over seven inches from Sycamore proper northward. As of 31 July, year-to-date liquid-equivalent precipitation totaled 26.27 in ., which is 120 percent of the historical average. Crop moisture in northern Illinois was labeled on 24 July by NOAA's Climate Prediction Center ([http://www.cpc.ncep.noaa.gov/products/analysis_monitoring/regional_monitoring/cmi.gif](http://www.cpc.ncep.noaa.gov/products/analysis_monitoring/regional_monitoring/cmi.gif)) as "abnormally moist" west of a La Salle-Peru to Rockford line and "wet" east of that line.
