| 31 | 85 | 16 | 58 | 39 | 63 | 31 | 47 | 0 | 18 | 0 | 0 | 0 |

*A NEW RECORD HIGH was recorded on the $10^{\text {th }}$; the previous record was 87 , which was set in 1938 at the former Sycamore site.

## Temperature

1971-2000 AVG. HI: 63.1(F)
1971-2000 AVG. LOW: 40.8(F)
1971-2000 AVG. TEMP: 52.0(F)
October 2010 AVG. HI: 67.3(F)
October 2010 AVG. LO: 41.5(F)
October 2010 AVG. TEMP: 54.4(F)

## Precipitation

October 2010 TOT AL: 1.74 in.
October AVG: 2.60 in.
October 2010 SNOW: 0.0 in.
2010 liquid-eq. YEAR TO DATE: 33.01 in .
liquid-eq. YEAR TO DATE AVG: 32.40 in .
2010-11 Seasonal SNOW TO DATE: 0.0 in.
Seasonal SNOW TO DATE AVG: 0.1 in.

## Discussion

October 2010 ended with an above-average mean temperature of 54.4 degrees, some 2.4 degrees above the historical (30-year, 1971-2000) average of 52.0 degrees. Daytime (or maximum temperatures) generally had the greatest positive anomalies. The most anomalously warm temperatures occurred bet ween the $9^{\text {th }}$ and the $13^{\text {th }}$, and, during this period, a record high temperat ure of 88 degrees was recorded on the $10^{\text {th }}$. The first freeze of the cold season occurred on the $22^{\text {nd }}$, much laterthan 8 October, which is the historic average date of first freeze. Indeed, the late first freeze combined with an early last freeze in early April 2010 ledto a longer-than-historical-average growing season of 195 days. The historical average growing season length is 162 days, and 187 days is the growing season length corresponding to being longer than 90 percent of all growing seasons.

Precipitation during October was below the historical average. No snowfall was recorded. The total liquid equivalent precipitation of 1.74 in . was only 70 percent of the historical average of 2.60 in . Also, the precipitation that did fall lacked even temporal distribution. No measurable precipitation occurred for the 21 -day period between the $3^{\text {ri }}$ and the $23^{\text {rd }}$, the longest such period since a 24 -day period bet ween 21 August and 14 September 2005 during the historic drought which occurred that year. Moreover, all but 0.15 in. (which was recorded on the $2^{\text {nd }}$ ) of the month's precipitation fell in association with a powerful extratropical cyclonethat traversed the Great Plains and western Midwest bet ween the $24^{\text {th }}$ and $27^{\text {th }}$. In fact, this extratropical cyclone had the second-lowest central barometric pressure on record for the continental United States and the lowest recorded for the region of the United States between the Rocky Mountains and the Appalachian chain. The lowest pressure recorded for this cyclone was $955.2 \mathrm{hPa}(28.21 \mathrm{inHg})$ at the ASOS at Bigfork, Minn., around 1700 local time on the $26^{\text {th }}$. The lowest pressure for the cyclone that was recorded at the DeKalb-Taylor Municipal Airport AWOS four miles east-southeast of the Co-op station near Cortland was $981.3 \mathrm{hPa}(28.98 \mathrm{inHg})$ at 0645 local time on the $26^{\mathrm{hh}}$. This storm caused strong winds that gusted to near 55 MPH in DeKalb on the $25^{\text {th }}$ and $26^{\text {th }}$, two tornadoes rated EF-1 on the Enhanced Fujita Scale in the local area around dawn on the 26th (one approximately 20 miles west-southwest of the Co-op station along Meridian Road three miles southeast of Ashton; another approximately 15 miles east of the station along the Francis Side Road two miles west of Elburn), and a microburst around dawn on the 26th approximately 15 miles east-southeast of the station along Keslinger Road between Elburn and Daubermann Road.

Adam Dawson, Sanghoon Kim, Robert Niesen, Sean Poulos, and Laura Schutte-Cooperative Observers; Daniel J. Brouillette and Alecia Osborne-Co-Weather Directors This summary was prepared by Daniel J. Brouillette, 1 November 2010. Forecast information (updated once daily at approx. 7:30 am): (815) 753-1623.
