## Precipitation

September 2010TOTAL: 2.04 in. September AVG: 3.47 in.
September 2010 SNOW: 0.0 in.
2010 liquid-eq. YEAR TO DATE: 31.27 in . liquid-eq. YEAR TO DATE AVG: 29.80 in . 2010-11 Seasonal SNOW TO DATE: 0.0 in. Seasonal SNOW TO DATE AVG: 0.0 in.

## Discussion

Temperatures in September 2010 averaged near the historical (30-year, 1971-2000) averages. The mean temperature was 74.6 degrees compared to the historical average of 75.6 degrees. While temperatures averaged near normal, there were periods of anomalously warm or even hot conditions interspersed by anomal ously cool conditions. Indeed, a high of 91 degrees was recorded on the $1^{\text {st }}$, which brought the annual total of days on which a high temperature of 90 degrees or higher was recorded to 14 days. Other periods of anomalous warmth occurred around the $13^{\text {th }}$ and $14^{\text {th }}$ and between the $21^{\text {st }}$ and $24^{\text {th }}$, when daily record high temperatures were threatened for the $22^{\text {nd }}$ ad $24^{\text {th }}$. Anomalously cool conditions, particularly during the day, were noted on the $4^{\text {th }}$ and $5^{\text {th }}$, between the $17^{\text {th }}$ and $20^{\text {th }}$, and between the $26^{\text {th }}$ and $28^{\text {th }}$ (when a high temperature of 56 degrees, some 16 deg rees below the daily historical average high, was recorded).

Precipitation during September 2010 totaled 2.04 in., which was 59 percent of the historical average and lower than approximately 75 percent of Septembers since 1896 . While the topsoil has dried to the extent that the NOAA Climate Prediction Centre's 25 September Crop Moisture Index shows "slightly dry/favorably moist conditions in northern Illinois (http://www.cpc.ncep.noaa.gov/products/analysis monitoring/regional_monitoring/cmi.gif), deeper soil moisture remains high after a wet late spring and summer as evidenced by the CPC's Palmer Drought Severity Index of"very moist spell" for northern Illinois (http://www.cpc.noaa.gov/products/analysis monitoring/regional monitoring/palmer.gif). Nonetheless, it has been observed that the drier conditions of late allowed local farmers to begin an early harvest of dent corn as early as mid-month and soybeans in the last week.

For those interested, the end of Water Year 2010 (which began on 1 October 2009) was on 30 September, and the total liquid equivalent precipitation for WY-2010 was 43.10 in., 115 percent of the historical annual average of 37.40 in . Total snowfall for the period was 42.9 in ., 123 percent of the historical annual average of 35.0 in .
