## Discussion

Temperatures in March 2013 were below normal temperatures. The mean temperature for the month was 28.6 degrees, about 7.6 degrees below the historical ( $30-$ year, 1981-2010) average of 36.2 degrees. This mean-temperature value is the lowest on record since 1966; the current record value was 22.9 degrees, set in 1960. The monthly average high temperature of 35.4 degrees ( 11.4 degrees below the historical-average value) was also the lowest on record since 1966 (current record: 33.3 degrees, 1960). The monthly average low ranked $5^{\text {th }}$ lowest since 1966 and was 5.2 degrees cooler than the normal average low temperature. There were only 3 days out of the month with highs above average and 7 days with lows above average.

Precipitation in March was also below the historical average. Liquid-equivalent precipitation totaled 1.89 in ., the historical-average total being 2.26 in. The temporal distribution of the rainfall was uneven, with most of it falling in the beginning of the month. Year-to-date precipitation as of the end of the month totaled 8.03 in., about 52 percent above the historical-average total of 5.28 in., making this the $5^{\text {th }}$ wettest Jan- Mar on record since 1966 (wettest on record is 12.77 in set in 1898). March snow totaled 11.8 in ., 7.6 in above the average of 4.2 in . This makes this March the $4^{\text {th }}$ snowiest on record since 1966 (the record being in 1912 with 25 in .)

March has also had the most heating degree-days on record since 1966; the current record is 1295 recorded in 1960.
