## Discussion

July 2016 temperatures were either at or above the historical (30-year, 1981-2010) averages. The average high temperature of 82.2 degrees is equivalent to the historical average high temperature. The average low of 64.7 degrees was 1.8 degrees above the historical average low temperature. The July average temperature is only 0.3 degrees above the July historical average. There were 3 days that had low temperatures of 56 degrees, all of which were lower than their respective average low temperature. Only two days surpassed 90 degrees in July 2016.

Total liquid-equivalent precipitation for this month was 5.30 in ., which is about an inch above the historical average total of 4.32 inches. The year to date liquid equivalent now stands at 22.15 in., which is 0.56 inches above the year to date average of 21.59 in. July $6^{\text {th }}$ and $27^{\text {th }}$ accounted for more than half ( $63.8 \%$ ) of the total monthly precipitation.
